

The Triple S O₃ Professional Cleaning System...how does it work?

The Ozone Solution is the safest and healthiest way to clean.

- All natural stain remover, deodorizer and sanitizer
- Reverts back to oxygen and water while leaving no harmful residue
- Effective on all surfaces, even natural wood and stone

How it cleans

Considered the building blocks of all organic matter, proteins are composed of strings of amino acids held together by peptide bonds. The unstable O₃ atom breaks these peptide bonds, destroying the proteins and leaving behind base amino acids which continue to react with ozone and break down into even smaller inert, inactive particles.

With just a wipe of a cloth or a swipe of a mop, you can remove the suspended particles from any surface.

The Ozone Solution breaks down difficult stains like red wine, tomato juice, fatty acids, oils, dyes, urine, mold, mildew, coffee, tea and more. And when charged, it can clean for up to 40 minutes.

Simply spray the area to be cleaned and allow the solution to sit for 60 seconds, then wipe clean with a microfiber cloth or mop.

How it sanitizes

The Ozone Solution created by the O₃ Professional Cleaning System has been proven effective as a sanitizer in keeping with EPA protocol. Like a chemical cleaner, it kills bacteria by attacking the cell wall. The difference is that with the O₃, bacterial cells absorb the ozone which ruptures the cell wall from the inside out. Once the cells are destroyed, they are suspended within the solution and can easily be removed from the surface with a microfiber cloth or mop.

The Ozone Solution continues to sanitize for up to fifteen minutes after charging. And it leaves no residue so there's no need to rinse.
